PROFESSIONAL EXPERIENCE

Ortadel Technologies Corporation

Feb. 2025 - May, 2025

Web Developer Intern

- Migrate website to Drupal CMS
- Improve document system security (GDPR & HIPAA compliant)
- Lead team using AGILE sprints for efficient development

Barangay 781 zone 85 Sta. Ana Manila

Sept. 2023 - April 2025

Backend - Developer

- Developed Barangay 781 website for document and resident services
- Led collaborative, goal-driven development
- Improved UX with Laravel, Bootstrap, and jQuery

EDUCATION

University of Makati

2021 - 2025

Bachelor of Science in Computer Science Major in Application Development

- Dean's Lister
- Thesis: **VERIFYID: An online barangay system with identity authentication through integration of image recognition.**
 - It streamlines document requests, enables resident monitoring, and authenticates identities through facial recognition built in Laravel, Bootstrap, CNN, and YOLOv8 .

RECOMMENDATION LETTER

February 26, 2025

Mr. RJAY L. ORTIZ

President

Ortadel Technologies Corporation

Unit 114, 2nd Floor, Corinthian Executive Regency, Ortigas Ave., Brgy. San Antonio, Pasig City

Dear **Mr. Ortiz**,

We are an educational institution responsible in helping and molding students to become qualified professionals in various industries. As part of the standard procedures and curriculum requirements, students go through actual experience in the specific industry of specialization through the **Internship / On-the-Job Training Program**. This program provides our graduating students the opportunity to apply their knowledge and skills in the industry.

In view of this, we request your prestigious establishment to accommodate our student-trainee/s to work with you for a period of **390 hours** to commence at your discretion, through an **hybrid** work arrangement.

CANLAS, CLYDE D.
RAMOS, ANNE LORRAINE F.

ENRIQUE, JHON MARK A.
SIMPLINA, JAY JOB M.

USON, GRINNEL ALLISON

Requirements leading to **Bachelor of Science in Computer Science (Application Development Elective Track)** have already been completed by our recommendee/s. The opportunity you extend to our students will certainly pave the way for their success as future professionals and productive citizens.

We shall remain grateful to you for your kind assistance and support.

Very truly yours,

Asst. Prof. ALI A. NAIM, MIS

Institute/College Internship Coordinator

Ms. CYNTHIA MARGARETTA R. JOSE

Director

Center for Linkages and Placement

ACCEPTANCE LETTER

(to be completed by the company representative)

We are pleased to accept the above-named student/s as an intern/s at (training company) ORTADEL Technologies Corporation
and work 8 hours per day from February 10, 2025 to May 02, 2025.
(working hours per day) (start date of training) (end date of training)

Signature: _____

Name: RJAY L. ORTIZ

Position: President

Contact: 09952312029

IMPORTANT:

Please ensure that you submit **1 copy** (per student) of the completely signed letter to the Center for Linkages and Placement, no later than the specified deployment date. Additionally, retain and bring your personal copy of the form on the clearance day for verification.

College of Computing and Information Sciences

INTERNSHIP PLAN

Intern: **JHON MARK A. ENRIQUE** Intern Title/Role: **IT INTERN**
Company: **ORTADEL TECHNOLOGIES CORPORATION**

Internship Objectives	Activities/Task
Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Create a custom theme for a Drupal site. Integrate Twig templates for different types of content (nodes, blocks, views).
Develop skills in Svelte, a modern JavaScript framework, by building interactive and reactive user interfaces. Learn how Svelte differs from traditional frameworks like React and Vue, and apply it effectively in web development projects.	Build a Basic Svelte App: Create a simple counter app to understand Svelte's reactivity and component structure. Component-Based Development: Develop reusable Svelte components such as buttons, modals, and form inputs. State Management: Learn how Svelte handles state using stores and context API.
Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Develop a secure and user-friendly website using SeedDMS by implementing a robust security system with advanced encryption and decryption techniques for database protection. Ensure a seamless user experience by integrating an intuitive UI/UX design, optimizing navigation, and enhancing accessibility.
Work within agile or collaborative team environments, communicating effectively with team members, designers, and stakeholders, especially in Drupal-based projects. Build a strong foundation in setting up and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Work alongside other developers on a team project. Implement features while following a consistent code style and best practices
Learn how to write automated tests for Drupal modules, conduct code reviews, and ensure that Drupal sites meet high-quality standards through both manual and automated testing. Develop problem-solving skills by tackling performance optimization, module development, and troubleshooting in Drupal-based environments.	Learn to interact with Drupal's database using the Entity API and custom entities. Write queries to retrieve or store data from the database.

INTERNSHIP AGREEMENT FORM (Internship Plan)

This serves as an official agreement between my internship supervisor and me. We have agreed that I will be working for ORTADEL TECHNOLOGIES CORPORATION in Unit 114, 2nd Floor, Corinthian Executive Regency, Ortigas Ave., Brgy. San Antonio, Pasig City. My supervisor is Rjay L. Ortiz, the branch recruitment officer. My internship job title is IT INTERN. The internship dates are 02/17/2025 through 05/02/2025. The primary learning objectives for this internship are the following:

1. Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.
2. Develop skills in Svelte, a modern JavaScript framework, by building interactive and reactive user interfaces. Learn how Svelte differs from traditional frameworks like React and Vue, and apply it effectively in web development projects.
3. Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.
4. Work within agile or collaborative team environments, communicating effectively with team members, designers, and stakeholders, especially in Drupal-based projects. Build a strong foundation in setting up and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.
5. Learn how to write automated tests for Drupal modules, conduct code reviews, and ensure that Drupal sites meet high-quality standards through both manual and automated testing. Develop problem-solving skills by tackling performance optimization, module development, and troubleshooting in Drupal-based environments.

PRACTICUM LEARNING EXPERIENCE REPORT

Introduction

The practicum provided me with an essential opportunity to apply the knowledge and skills I gained throughout my academic journey in a real-world setting. It aimed to expose me to actual industry practices and workflows, which are crucial for my professional and personal growth. This hands-on experience was designed to help me bridge the gap between theoretical learning and practical application, preparing me for the challenges of the IT field. I completed my internship at ORTADEL TECHNOLOGIES CORPORATION, an IT solutions provider known for delivering web applications, software development, and IT support to businesses. The company is located in Unit 114, 2nd Floor, Corinthian Executive Regency, Ortigas Ave., Barangay. San Antonio, Pasig City and operates in a dynamic, fast-paced environment where innovation and efficiency are highly valued. My practicum lasted for approximately thirteen weeks, from February 10, 2025, to May 5, 2025. During this period, I aimed to strengthen my technical skills in application development, improve my problem-solving and time management abilities, and develop effective communication skills within a professional setting. Through this practicum, I sought to gain valuable industry exposure that would better prepare me for a successful IT career.

Organizational Profile

Ortadel Technologies Corporation was established in 2018 with the goal of providing innovative and customized IT solutions to help businesses grow and succeed in the digital age. The company's mission is to empower organizations through technology by delivering tailored, efficient, and reliable IT services. Its vision is to become a leading IT solutions provider recognized for technological excellence and customer satisfaction. Ortadel follows a collaborative organizational structure that encourages close coordination among departments, promoting flexibility, open communication, and teamwork across all levels of the company.

Ortadel Technologies is organized into several key departments that work together to provide comprehensive IT services. The IT Consulting Department offers strategic advice and technology planning. The Software Development Department focuses on creating custom software, web, and mobile applications. The Cloud Services Department manages cloud migration and infrastructure. The IT Infrastructure Department handles the design and maintenance of reliable IT systems, while the Cybersecurity Department ensures data protection through security assessments and continuous monitoring. The Support and Maintenance Team provides ongoing technical assistance to keep client systems running smoothly.

The work environment at Ortadel Technologies is collaborative, supportive, and fast-paced. The company encourages open communication, continuous learning, and teamwork. Employees and interns are treated as valuable contributors and are given opportunities to apply their skills to real projects. Supervisors are approachable and provide regular guidance and feedback. The culture is driven by a commitment to quality,

innovation, and client satisfaction, making it an ideal workplace for professional growth and skill development.

Practicum Activities and Experiences

During my practicum at Ortadel Technologies Corporation, I was primarily assigned to tasks related to Drupal Content Management System (CMS) development and website conversion. My daily activities included researching Drupal and archiving systems to develop a deeper understanding of CMS and its functionalities. I worked on converting two existing websites to Drupal CMS, focusing on areas such as the homepage, landing page, events, news, and the barangay officials' page. This involved creating Drupal sites using Bootstrap, exploring Drupal plugins, extensions, controllers, and Twig templates. I also regularly uploaded project updates to GitHub, merged team branches, and participated in online meetings with my supervisor, Sir Junard, to discuss project progress, address issues, and plan further tasks. In the latter part of the practicum, I assisted with debugging, deployment, and collaborative development of other teams' websites. Additionally, I worked on a file archiving system using SeedDMS, applying security measures such as AES-256 encryption, SSL/TLS for secure file transfers, and malware scanning.

The practicum helped me develop various technical and soft skills. I significantly improved my skills in Drupal CMS, GitHub version control, website development, and security practices like encryption, decryption, and malware detection. I also enhanced my problem-solving abilities by identifying bugs, debugging complex systems, and learning how to manage encryption-related errors. Through team collaboration and frequent meetings, I strengthened my communication skills and teamwork, as I often worked closely with my teammates and other groups to troubleshoot and complete shared tasks.

Additionally, I gained valuable experience in project management by tracking the progress of multiple projects, splitting tasks with my co-interns, and understanding real-world workflows.

Throughout the practicum, I encountered several challenges. One of the major difficulties was dealing with complex bugs and errors during the website conversion process, such as issues with content retrieval, incorrect page display, and GitHub merging conflicts. To overcome these, I conducted detailed code reviews, collaborated with my teammates, and sought guidance from my supervisor. Another challenge was implementing encryption and decryption processes, which caused system errors when data sizes were less than the required encryption block size. I addressed this by carefully analyzing the errors, studying encryption principles, and collaborating with my teammates to solve these issues. Additionally, I faced difficulties in integrating malware scanning into the system due to a lack of available testing tools. To resolve this, I continued researching proper malware detection methods and consulted available security resources. Overall, each challenge allowed me to improve my troubleshooting skills and gain practical experience in real-world IT problem-solving.

Learning and Reflection

Throughout my practicum at Ortadel Technologies Corporation, I was able to apply the theories and concepts I learned in my Bachelor of Science in Computer Science major in Application Development. My knowledge of Content Management Systems (CMS), web development, database management, system security, and software development life cycles became essential in understanding the processes involved in converting static websites to dynamic Drupalbased platforms. Concepts from my software engineering classes, such as version control using GitHub, project collaboration, and system design, were directly applied during the practicum. Additionally, my coursework in cybersecurity helped me understand the importance of data encryption, secure file transfers, and malware scanning, which I later implemented in the archiving system project. The practicum provided me with a valuable opportunity to connect classroom theories to real-world development environments.

The practicum greatly contributed to both my personal and professional development. I gained real experience working with Drupal CMS, project version control using GitHub, and collaborative development in a team setting. I became more confident in communicating with my teammates and supervisors, especially during project discussions, online meetings, and collaborative problem-solving sessions. The practicum taught me the importance of time management, responsibility, and continuous learning in a professional workplace. I also developed patience and resilience in handling complex errors and system bugs. This experience allowed me to grow from a student into a more competent and independent developer, ready to face future industry challenges.

One of my key strengths is my problem-solving ability and adaptability. I was able to quickly learn new technologies like Drupal and apply them effectively in website conversions and system development. I also demonstrated strong teamwork and communication skills, especially when collaborating with different groups and assisting other teams in debugging their systems. However, I identified that I need to further improve my skills in advanced cybersecurity, particularly in malware scanning and data decryption processes, where I encountered some difficulties during the practicum. Additionally, I would like to enhance my proficiency in system analysis and deeper back-end development to better handle complex system structures in the future.

Conclusion and Recommendations

My practicum experience at Ortadel Technologies Corporation provided me with valuable hands-on knowledge and practical skills that greatly enhanced my learning beyond the classroom. I gained a deeper understanding of Drupal CMS, website conversion processes, encryption and decryption methods, and the importance of cybersecurity in system development. I also learned how to collaborate effectively in a professional team, communicate project updates, and solve complex system errors. This experience helped me bridge the gap between theory and practice, preparing me for realworld IT projects.

For future practicums, I recommend providing more structured project guidelines and clearer task breakdowns at the beginning of the internship. This will help students quickly understand their responsibilities and how their work contributes to the overall project. Additionally, I suggest offering more training sessions or workshops on specific tools like Drupal, GitHub, and security protocols to better prepare interns for the technical challenges they may encounter. More regular feedback sessions with supervisors would also greatly help students track their progress and improve their work throughout the practicum.

This practicum experience has strengthened my passion for web development, system security, and collaborative software projects. It has influenced me to pursue a career as a web developer or system security specialist, with a particular interest in CMS platforms like Drupal and the integration of security features in web applications. Moving forward, I plan to continue enhancing my skills in system security, back-end development, and project management to become a well-rounded IT professional capable of contributing to advanced technology solutions.

PRACTICUM WEEKLY REPORT

Month: February / Week No.: 1

Period Covered: February 10-14, 2025

Company: ORTADEL Technologies Corporation

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
February 10 / MON	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Research about Drupal and Archiving Systems. Do have deep understanding in Content Management System (CMS) and Archiving System	I'm having trouble understanding Drupal because it differs from WordPress in terms of CMS, although later on I understand the general workflow of Drupal CMS, which can manage creating and making new layouts or modifications for every page.	2
February 11 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Showing us the task to convert the 2 website to Drupal CMS and our supervisor discussed the workflow of the current system that need to modify and convert to CMS	There are quite a few parts that I am confused with, for example the uses of twigs file and so I reread again about the drupal on how to assess or use twigs, blocks, and views for the conversion of websites. As for me, I frequently study things on my own even when I'm struggling since I'm scared to seek help or to ask our supervisor anything. This taught me that you should ask your supervisor about any issues that can be resolved quickly or that can be brought to your attention immediately. This will speed things up and improve my understanding.	8
February 12 / WED	.Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies	Continue to study Drupal 10.0.0 and Composer the extension and plugins that we may use for conversion of website and future references	I tried using Drupal to create a simple CMS and encountered that having trouble in Clearing Caches using drush cr its either need to use the bash terminal or Composer of drush is not compatible. Solving this is by check the version of the composer of extensions if it is under or compatible to the version of drupal you use	8

	(e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.			
February 13 / THU	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Continue to Study Drupal and Explore plugins, extensions and uses of twigs and Controllers	I learn how to setup drupal with some of extensions like devel, toolbar, sliders and able to access it in my twigs only problem i encounter is how do i make it like mobile responsive so I research about it and it may able to use css or bootstrap or any front end framework	8
February 14 / FRI	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Continue to Study Drupal and Explore how drupal places contents while wait for the finalization of website that needed to be converted	I learned how to create new contents ,blocks and views. It seems like I'm creating a new table in the database. I encountered a problem on how do I apply twigs on it so tried to watch videos and read articles about drupal	8

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
February 17 / MON	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems. .	Continue to study Drupal 10.0.0 and 10.3.9, tried to create a drupal site with use of bootstrap	While creating a Drupal site using Bootstrap with Drupal 10.0.0 and 10.3.9, I faced compatibility issues, which I resolved by matching the Bootstrap theme version with Drupal. Bootstrap library loading issues were fixed by configuring the .info.yml file and adding the correct CDN. Template and menu alignment problems were resolved by adjusting Twig templates and adding Bootstrap classes. Missing JS dependencies were fixed by installing jquery and popper.js in .libraries.yml. I learned to handle compatibility, configure libraries, modify templates, and manage dependencies in Drupal.	7
February 18 / TUE	Work within agile or collaborative team environments, communicating effectively with team members, designers, and stakeholders, especially in Drupal-based projects. Build a strong foundation in setting up and customizing	Continue studying Drupal 10.0.0 and 10.3.9, and try utilizing bootstrap to create a Drupal website. met with Sir Rjay to talk about security and privacy. Additionally, we met with Sir Junard to discuss the website we would be developing. He gave us additional information about	We met with Sir Rjay to discuss security and privacy, which helped us understand how to secure user data and manage access controls. Sir Junard provided insights about Drupal and assigned us to oversee a site conversion. We	7

	Drupal websites, including working with content types, views, blocks, and taxonomies. .	Drupal and assigned a task to oversee the conversion of the separate website.	initially struggled with the site's structure and integration but resolved it by reviewing Drupal documentation and consulting with Sir Junard, improving our understanding of Drupal and site migration.	
February 20 / THU	Work within agile or collaborative team environments, communicating effectively with team members, designers, and stakeholders, especially in Drupal-based projects. Build a strong foundation in setting up and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Converting website to drupal and had Online meeting with sir Junard for plugins and Encountered problems in development	While I was converting the website to Drupal, we had an online meeting with Sir Junard to discuss plugins and encountered issues during development. Some plugins were incompatible with the Drupal version, causing functionality errors. We resolved this by finding alternative plugins and adjusting configurations to match Drupal's requirements. Additionally, we faced layout issues, which we fixed by modifying the theme settings and template files. Through this process, we learned how to handle plugin compatibility, configure settings, and adjust templates in Drupal.	8
February 21 / FRI	Work within agile or collaborative team environments, communicating effectively with team members, designers, and stakeholders, especially in Drupal-based projects. Build a strong foundation in setting up and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Converting Website to drupal in part of landing page and retrieving of contents, Uploading to Git hub and turn over the Figma design	While converting the website's landing page and retrieving content in Drupal, we encountered issues with content formatting and alignment. We resolved this by adjusting the theme settings and modifying the Twig templates. Uploading to GitHub also presented some merge conflicts, which we fixed by reviewing the commit history and resolving conflicts manually. Additionally, turning over the Figma design required adjustments to match the design accurately in Drupal. Through this process, we learned how	8

			to manage content retrieval, handle Git conflicts, and align designs with Drupal templates.

Period Covered: March 3-7, 2025

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 3 / MON	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems	drupalizing of Website by applying view to about us, news and event and add multiple blocks	While Drupalizing the website by applying views to the about us, news, and events sections and adding multiple blocks, we encountered issues with content display and block positioning. Some content was not appearing correctly due to incorrect field mapping in the views configuration, which we resolved by adjusting the content types and view settings. Additionally, block alignment issues were fixed by modifying the Twig templates and updating the CSS. Configuring multiple blocks also caused conflicts in the layout, which we resolved by setting proper block weights and permissions. Through this process, we improved our understanding of views configuration, block management, and template customization in Drupal.	8
March 4 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while	drupalizing of Website by applying view and customize, news and event and add multiple blocks	While Drupalizing the website by applying and customizing views for the news and events sections and adding multiple blocks, we encountered issues with content sorting and pagination. The news and events were not displaying in the correct order due to incorrect sorting settings in the views module, which we resolved by adjusting the sorting criteria. Pagination was also not working properly, which we fixed by enabling the pagination option in the view settings. Through this process, we improved our understanding of sorting, pagination, and view configuration in Drupal.	8

	deepening your understanding of Drupal's API and core systems			
March 5 / WED	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems	drupalizing of Website by applying view and block to about us	While Drupalizing the website by applying views and blocks to the about us section, we encountered issues with configuring a slideshow plugin and recognizing block names in Twig templates. The slideshow was not displaying correctly due to missing library dependencies, which we resolved by installing the required libraries and updating the configuration. Additionally, some block names were not recognized in the Twig templates, which we fixed by checking the block IDs and updating the template files. Through this process, we improved our understanding of plugin integration, block management, and template customization in Drupal.	8
March 6 / THU	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems	trying to debug website and merging github, Online meeting with sir Junard for checking the status of 2 website in different teams	While debugging the website and merging changes in GitHub, we encountered conflicts due to overlapping code updates, which we resolved by reviewing the commit history and manually resolving the conflicts. During an online meeting with Sir Junard, we discussed the status of two websites handled by different teams and identified inconsistencies in content structure and styling. We addressed these issues by aligning the content types and updating the CSS settings. Through this process, we improved our skills in conflict resolution, version control, and content consistency in Drupal.	8
March 7 / FRI	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems	trying to debug website and merging github and fixing the error that cause bugs to website	While debugging the website and merging changes in GitHub, we encountered errors that caused bugs in the site's functionality. Some features were not working due to code conflicts and missing dependencies, which we resolved by reviewing the error logs and updating the affected files. Additionally, merging conflicts in GitHub were fixed by carefully checking the commit history and resolving discrepancies. Through this process, we improved our troubleshooting skills, learned better version control practices, and gained a deeper understanding of debugging in Drupal.	8

Month: March / Week No.: 6

Company: ORTADEL Technologies Corporation

Period Covered: March 17-21, 2025

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 17 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Checking some bugs in Pio and Help Fs belinario team to push the drupal to FTP	While updating errors in Pio and debugging features in FS Belinario, we encountered issues with misaligned features, uneven spacing in different regions, broken images, and improperly displayed text. The alignment and spacing issues were fixed by adjusting the CSS properties and ensuring consistency across different screen sizes. Broken images were resolved by correcting file paths and updating missing files, while text display issues were fixed by adjusting font settings and encoding. This process highlighted the importance of consistent styling, proper file management, and responsive design for better user experience.	8
March 18 / TUE	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Reading parts of Seed DMS and search for security assigned in archiving system	While exploring Seed DMS and searching for security assignments in the archiving system, the main challenge was being unfamiliar with the platform's structure and configuration. Navigating the system and understanding how permissions and security settings are managed took some time. However, by reviewing the documentation and experimenting with different settings, I gradually learned how to define user roles, manage access levels, and secure archived files. This experience	8

			highlighted the importance of hands-on practice and thorough documentation review when working with a new system.	
March 19 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	trying to install SeedDMS and encounter some errors in installing like files are not existing	While installing SeedDMS, I encountered errors related to missing files, which prevented the installation from completing. The issue was traced to incomplete downloads and missing dependencies. I resolved it by verifying the installation package, ensuring all required files were present, and installing any missing dependencies. This process taught me the importance of checking file integrity, reviewing installation guides, and troubleshooting dependency issues for a smooth setup.	8
March 20 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	upload the SeedDMS in github and share to group, Read more about SeedDMS able to use in the Project	While uploading SeedDMS to GitHub and sharing it with the group, I encountered issues where some files were not pushing through. I resolved this by checking the file paths, ensuring there were no connection issues, and manually adding the files using <code>git add</code> . This experience taught me the importance of verifying file integrity and connection stability when pushing to a repository.	8
March 21 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Read more about SeedDMS and explore how 2FA will apply using SeedDMS, Do search for encryption and Decryption	While exploring SeedDMS and researching how to apply 2FA, I encountered challenges understanding the platform's authentication framework and how to integrate external 2FA solutions. I resolved this by reviewing the SeedDMS documentation and exploring available plugins for multi-factor authentication. Additionally, while researching encryption and decryption, I gained a better understanding of securing data using encryption algorithms and properly managing keys for secure access. This process highlighted the importance of understanding authentication mechanisms and encryption standards for improving system security.	8

PRACTICUM WEEKLY REPORT

Month: March / Week No.: 7

Company: ORTADEL Technologies Corporation

Period Covered: March 24-28, 2025

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 24 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	debug in uploaded merge in github and read tasked of archiving based on security file given to us	While debugging an uploaded merge in GitHub, I encountered conflicts and incomplete file uploads, which caused issues in the repository. I resolved this by carefully reviewing the merge conflicts, fixing them manually, and ensuring all files were correctly pushed. Additionally, while reading the task on archiving based on the security file provided, I gained a better understanding of setting file permissions and access levels to enhance data security. This experience taught me the importance of careful conflict resolution and proper file access management in archiving systems.	8
March 25 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Done debugging and Fixing the QA issues in gen pio and help on fsbelinario	During QA testing for the Pio Del Pilar and Fs Belinario websites, several issues were identified and resolved. For the Pio Del Pilar site, missing images on the home page and footer were caused by incorrect file paths and caching issues, which were fixed by correcting the paths and clearing the cache. The recruitment link to the Makati City Police Facebook page was updated, and the "Download application form" button for barangay clearance and ID was made functional by uploading the correct file. For the Fs Belinario site, the "Get Started" button was fixed by assigning the correct link, the last image in the carousel was displayed by updating the file reference, and the header logo in the gallery album was restored by uploading the missing file. Additionally, the contact form issue, where it could be submitted without input, was resolved by adding form validation.	8

			This process reinforced the importance of accurate file referencing, proper link assignments, and thorough testing.	
March 26 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Send a Feedback fro the QA and Wait for response and do test in backend side of archiving	After sending feedback from the QA and waiting for a response, I encountered issues with SeedDMS not displaying properly after installation. The problem was traced to incorrect configuration settings and missing dependencies. I resolved it by reviewing the installation steps, correcting the configuration files, and installing the missing dependencies. This experience taught me the importance of proper setup and verifying system requirements during installation.	8
March 27 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Assessing how to Apply the non functional and functional in SRS	While assessing how to apply the functional and non-functional requirements in the SRS for SeedDMS, I encountered difficulties in clearly distinguishing between functional and non-functional requirements, especially regarding encryption and access control. I resolved this by carefully analyzing the definitions and examples, ensuring that functional requirements focused on specific actions like encryption and access control, while non-functional requirements addressed performance, security, and compliance. This process improved my understanding of how to structure SRS requirements to cover both functional behavior and system performance.	8
March 28 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Splitting the task in Security with Anne to speed things up but we are in a tentative task to determine which tasks are suitable and easy for us. Meeting with sir Junard Discuss the needs in the Archiving and Do's and Don'ts	While splitting the security tasks with Anne to speed up the process, we faced challenges in determining which tasks were suitable and manageable for each of us, especially regarding audit logs and file encryption. After discussing with Sir Junard, we clarified that audit logs should be exportable via Excel, file upload size should be limited to 500MB, and audit logs are better stored in the database for better tracking. This helped us align our tasks more effectively and gain a better understanding of best practices for archiving and security implementation.	8

PRACTICUM WEEKLY REPORT

Month: March-April / Week No.: 8

Period Covered: March 31- April 4, 2025

Company: ORTADEL Technologies Corporation

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 31 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Fixing the current error encounter that cause in running the system	While running the system using SeedDMS, an error occurred due to misconfigurations and compatibility issues with the current PHP version. The main problems included internal server errors, deprecated PHP functions, incorrect file permissions, and database connection failures. The issue was resolved by checking server logs, updating configuration files, installing missing PHP extensions, correcting file permissions, and ensuring database credentials were properly set. In some cases, it was necessary to upgrade the PHP version or update SeedDMS to a compatible release. Through this process, I learned the importance of aligning software versions, managing server permissions, and using logs to troubleshoot open-source systems effectively.	8
April 2 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases.	Fixing the current error encounter that cause in running the system	While using SeedDMS, an error was encountered where uploaded documents were not being saved or displayed correctly in the document list. The issue was traced to an incorrect file path configuration and missing write	4

	Understand its database structure, user roles, workflow automation, and document versioning features.		permissions on the dms/data directory. After reviewing the configuration settings and adjusting directory permissions, the system was able to save and display documents properly. The resolution involved setting correct paths . This experience highlighted the importance of proper file handling, directory access rights, and configuration management in document management systems.	
April 3 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	I examined methods for securing file storage and transmission by implementing AES-256 encryption for uploaded files before storage, utilizing SSL/TLS for secure file transfers, and incorporating automatic key rotation to enhance overall security.	While implementing AES-256 encryption for uploaded files in the system, several issues were encountered, including difficulties with key management, slow file processing due to large file sizes, and compatibility issues during decryption. Integrating SSL/TLS for secure file transfers also required proper certificate configuration and handling of HTTPS redirects. Additionally, setting up automatic key rotation introduced challenges in securely updating and managing encryption keys without disrupting file access. These issues were resolved through proper use of encryption libraries, optimizing file handling processes, securing the key management system, and thoroughly testing SSL/TLS configurations. Through this process, I gained deeper knowledge of secure file encryption, the importance of efficient key management, and best practices for ensuring secure data transmission in web applications.	4
April 4/ FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	apply the encryption in part of uploading in Database and Decryption is till in progress due to unknown functions and files	While AES-256 encryption was successfully applied during the file upload process and encrypted files were stored in the database, a major issue was encountered during decryption. The encrypted files could not be properly decrypted due to unexpected output, and it was unclear where exactly in the system the decryption logic should be implemented. The challenge stemmed from scattered or undocumented file handling functions,	8

			making it difficult to trace the correct point for decryption. Efforts to resolve the issue included reviewing the file retrieval flow, inspecting SeedDMS core files, and adding debug logs to understand how files are accessed and served. Although the decryption issue remains unresolved, this process emphasized the importance of understanding the system's internal architecture, maintaining clear documentation, and isolating key processing points in secure data workflows.

April 7 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	apply the encryption in part of uploading in Database and Decryption is till in progress due to unknown functions and files and trying to apply the scanning of file have malwares	AES-256 encryption was successfully integrated during the file upload process, allowing secure storage of files in the database. Currently, the main challenge lies in determining the exact location within the system's files where decryption should be applied during file access or download. Due to the modular structure and limited documentation of SeedDMS, identifying the correct decryption point is still in progress. Alongside this, I began exploring the integration of a malware scanning feature for uploaded files to further enhance system security. Although the decryption logic hasn't been fully implemented yet, this ongoing process has been a valuable learning experience in understanding complex file handling workflows, improving my debugging and system-tracing skills, and reinforcing the importance of secure data practices in real-world applications.	8
April 8 / TUE	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Applying Scanning of malware in file but there are some issues need to fix regarding on Type of malwares and how to test if there are malwares in the file	While implementing malware scanning for uploaded files, several challenges arose, particularly regarding the identification and classification of different types of malware. The issue stemmed from difficulty in determining how to handle various file types (e.g., images, PDFs, Excels) and ensuring the malware scanner could accurately detect threats in each of them. Additionally, there were issues in testing the effectiveness of the malware scanning tool, as it was not clear how to simulate or test files with known malware signatures in a controlled environment. To address these, I explored different malware scanning libraries, ensuring they supported a variety of file types, and started reading documents with known malicious files to better assess the scanner's performance. This process enhanced my	4

			understanding of malware detection systems and reinforced the importance of thorough handling of diverse file formats when securing uploaded data.	
April 10 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	located where it should decrypt all encrypted data and apply and begin the decryption of all data. Online meeting with sir Junard regarding in the progress based on the SRS	While working on the decryption of encrypted data, the challenge was locating the correct point in the system where decryption should be applied to ensure all encrypted files are properly decrypted during retrieval. During an online meeting with Sir Junard, we reviewed the system requirements specification (SRS) to ensure the decryption logic aligns with the expected workflow. This meeting helped clarify the necessary steps and confirmed that the progress made so far was on track. Although the decryption process is still being fine-tuned, the meeting reinforced the importance of validating the system's progress against the SRS and aligning decryption functionality with the broader system design. This experience highlighted the value of consistent communication and system review to ensure progress stays aligned with project goals.	4
April 11 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	in progress of decrypting and encrypting of data based on the SRS	In the ongoing process of encrypting and decrypting data based on the system requirements specification (SRS), several challenges have arisen. One key issue was ensuring that encryption and decryption logic is properly aligned with the workflow described in the SRS, particularly in handling different file types and large data sizes. The difficulty lies in finding the right balance between secure encryption and efficient data retrieval, as well as ensuring decryption occurs seamlessly when files are accessed. Additionally, handling encryption keys securely and implementing proper error handling during decryption has proven complex. Through careful testing and reviewing the SRS with the team, we identified areas for improvement and aligned the encryption logic with the expected system behavior. Although some challenges remain, this process has deepened my understanding of secure data management and reinforced the importance of thoroughly aligning system functionality with specifications to ensure smooth and secure data handling.	8

During testing, decryption failures occurred due to inconsistent encoding, which we fixed by applying Base64 encoding and decoding standards. We also observed system slowdowns when handling large encrypted data, leading us to optimize by encrypting only sensitive parts. Lastly, we realized the need for proper error handling, so we added safeguards to prevent crashes during failed decryption attempts, which strengthened the system's reliability.	8

This was due to inconsistent encryption handling during data insertion. To resolve this, we collaborated with Anne to trace the source of the error and ensure all data was properly encrypted using the correct block size and padding method. From this, we learned the importance of validating data length before encryption and ensuring consistent encryption logic across all modules to avoid integrity issues during decryption.	8
April 23 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user	decrypting data and trying to figure out how to solve the error plus finding the part for Account	While working on data decryption, we encountered challenges in identifying and resolving errors related to improperly encrypted data. One major issue was locating the exact part of the system where account credentials were stored and ensuring they were consistently encrypted and decrypted. This required thorough code tracing and testing to avoid breaking authentication functionality. Through this process, we learned the importance of having a clear data flow for	8

	roles, workflow automation, and document versioning features.	credential to encrypt and decrypt	sensitive information and the need for consistent encryption standards, especially for critical fields like login credentials.

Understand its database structure, user roles, workflow automation, and document versioning features.	Encountered Error not displaying comments and in progress of decrypting of data based on the SRS	While in the process of decrypting data based on the SRS, we encountered an error where user comments were not displaying properly. This issue was traced back to encrypted comment data not being decrypted correctly before rendering. We are currently working on resolving this by ensuring the decryption process aligns with the encryption logic and meets the SRS specifications. This situation highlighted the importance of consistent data handling and thorough testing when working with encrypted content.	8
April 29 / TUE	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	in progress of decrypting of data based on the SRS and Encountered error the doesn't decrypt and some updates are not encrypting	We are currently in the process of decrypting data based on the SRS and encountered an error where some data fails to decrypt, and certain updates are not being encrypted as expected. This issue appears to stem from inconsistencies in the encryption and decryption flow, possibly due to missing conditions or incorrect key handling during updates. We are actively debugging the affected areas and reviewing the encryption logic to ensure data is securely processed in both directions. This experience is helping us understand the critical role of consistent implementation and proper validation in secure data management.	8
April 30 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases.
