

Introduction (20-30 seconds):

Hi, my name is Jomar Metoda. I'm currently a senior at the University of Makati, studying for a Bachelor of Science in Computer Science with a major in Application Development. I'm here to share a bit about my strengths, skills, and career aspirations as I prepare to embark on a professional journey in the tech industry.

Strengths (60-90 seconds):

One of my key strengths is problem-solving. During my time at the University of Makati, I've tackled various programming challenges and coursework that have honed my ability to think critically and find solutions under pressure. For example, in one of my capstone projects, I led a team that developed a mobile application for student tracking. We encountered several obstacles, particularly when integrating the database with real-time features, but through persistence and collaboration, we successfully implemented a solution that optimized performance.

Another strength of mine is teamwork. In both academic and extracurricular projects, I've worked closely with diverse teams. Whether it's delegating tasks or combining ideas to create a functional product, I value collaboration as a way to improve overall efficiency. My experience working on group projects has taught me the importance of clear communication and compromise to achieve our goals.

Skills (60-90 seconds):

I've gained strong skills in mobile and web application development, specifically using Flutter for cross-platform solutions. For instance, during an internship, I worked on an application that allowed users to book consultations with professionals in various fields. My role involved both front-end and back-end development, where I utilized Firebase for authentication and real-time database integration.

Additionally, I am proficient in programming languages such as Java, Python, and Dart. My academic projects have given me hands-on experience in developing scalable applications and refining code for efficiency. I also possess strong skills in UI/UX design, ensuring that the products I create are both functional and user-friendly.

Goals (30-45 seconds):

Looking ahead, my goal is to become a full-stack developer where I can apply my skills in both front-end and back-end development to build innovative applications. I'm particularly interested in projects that focus on enhancing user experience and integrating advanced technologies like machine learning. I believe my strengths in problem-solving and teamwork, combined with my technical skills, will allow me to thrive in this fast-evolving field.

Conclusion (20-30 seconds):

Thank you for taking the time to watch my video profile. I'm excited about the opportunities ahead and would love to discuss how my skills and experiences can contribute to your organization. I look forward to connecting soon!
