College of Computing and Information Sciences

PRACTICUM WEEKLY REPORT

Month: February / Week No.: 1

Company: ORTADEL Technologies Corporation

Period Covered: February 10-14, 2025

Internship Title: IT Intern

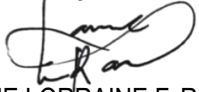

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
February 10 / MON	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Research about Drupal and Archiving Systems. Do have deep understanding in Content Management System (CMS) and Archiving System	I had some trouble understanding Drupal at first because it differs from WordPress in its CMS structure and workflow. WordPress is more user-friendly, while Drupal felt more complex. However, after spending more time with it, I gained a better understanding of Drupal's workflow, including how it manages content and layouts. Its flexibility allowed me to create new layouts and modify pages with more control, and though the learning curve was steep, I came to appreciate its power for building customized, scalable websites.	2
February 11 / TUE	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Showing us the task to convert the 2 website to Drupal CMS and our supervisor discussed the workflow of the current system that need to modify and convert to CMS	I'm a bit confused because, in Drupal, I expected everything to be managed through the admin interface, but I'm seeing that there are still Twig files involved. I'm not sure how the admin site relates to these templates, as they seem to control the layout and design, while the admin panel handles the content.	8
February 12 / WED	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Continue to study Drupal 10.0.0 and 10.3.2, the two versions that the team is planning to use.	I conducted an in-depth study on Drupal, examining its key features, content management capabilities, and overall flexibility. The research involved exploring Drupal's content creation and organization tools, its	8

			user-friendly interface for administrators and editors, as well as its robust taxonomy system that allows for efficient categorization of content. Additionally, I evaluated its scalability, customization options through modules and themes, and its ability to integrate with third-party services. The study aimed to assess how Drupal can be leveraged for building dynamic, user-centric websites and managing large volumes of content effectively.	
February 13 / THU	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Continue to study Drupal 10.0.0 and 10.3.2, the two versions that the team is planning to use.	I attempted to create a website using Drupal to explore its capabilities and customize a site tailored to my needs. While working with Drupal, I encountered a variety of challenges, from understanding its architecture to configuring the right modules and themes. Despite some initial hurdles, I gained valuable insights into the flexibility and scalability that Drupal offers for building dynamic websites.	8
February 14 / FRI	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Continue to study Drupal 10.0.0 and 10.3.2, the two versions that the team is planning to use.	I continued to create a website using Drupal, I learned how to create new content, blocks, and views in Drupal, which felt similar to setting up a new table in the database. However, I ran into an issue when I'm calling some of the fields on the page. I studied and researched more about it.	8

PRACTICUM WEEKLY REPORT

Month: February / Week No.: 2

Company: ORTADEL Technologies Corporation

Period Covered: February 17-21, 2025

Internship Title: IT Intern

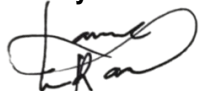

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
February 17 / MON	Gain hands-on experience in Drupal module and theme development, learning best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem.	Continue to study Drupal 10.0.0 and 10.3.2, the two versions that the team is planning to use.	I tried building a custom theme for the website, diving into the intricacies of Drupal's theming system. This involved creating custom templates, adjusting CSS, and integrating JavaScript to design a unique look and feel for the site. It was a hands-on process where I had to familiarize myself with Drupal's theme layer, the Twig templating engine, and the various hooks that allow for fine-tuned control over the site's appearance. Although it took some time to grasp the full potential, it was a rewarding experience that helped me understand how powerful and flexible Drupal can be for creating fully customized websites.	7
February 18 / TUE	Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Continue to study Drupal 10.0.0 and 10.3.2, the two versions that the team is planning to use. Had a meeting with Sir Rjay about security and privacy. Also had a meeting with sir Junard the website we are going to create and he taught us more about Drupal.	I gained valuable insights on security and privacy from Sir Rjay, which will not only be useful in my future projects but also during my thesis defense. Additionally, I learned a great deal about Drupal from Sir Junard, even though I'm still facing some challenges with it. To overcome these struggles, I took the initiative to explore and study the website we're planning to convert to Drupal, in order to better understand	7

			its structure and how to implement the necessary changes.	
February 20 / THU	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Refactoring a Website from vanilla code to Drupal, an Online Discussion with Sir Junard about Drupal and its plugins.	When I applied my custom theme for the website assigned to my team, the admin site also took on the same design, making it nearly impossible to navigate or use any of the admin features. This caused significant frustration, as I couldn't access the usual administrative tools needed for managing the site.	8
February 21 / FRI	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Converting the Gen. Pio website to incorporate elements from Drupal for the landing page. Retrieve and upload the content to GitHub.	I continued developing the website in Drupal and discussed the use of GitHub for version control with my team. We experimented with pushing and pulling the Drupal site to the repository and realized that the database also needs to be included when working with Drupal, since content and blocks are integral parts of it. This led to some conflicts within my team as we navigated how to properly handle and sync the database alongside the website files.	8

Supervisor's Remarks:

PRACTICUM WEEKLY REPORT

Month: February / Week No.: 3

Company: ORTADEL Technologies Corporation

Period Covered: February 24-28, 2025

Internship Title: IT Intern

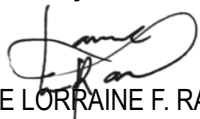

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
February 24 / MON	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Converted the Footer to Drupal and the Contact Us Page.	The image was not loading, even though it was successfully uploaded to Drupal. This issue was traced back to a misconfiguration in the file path or display settings. After investigating, the underlying cause was identified and addressed, allowing the image to load properly. This experience provided valuable insights into potential challenges with file handling in Drupal.	8
February 25 / TUE	Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Converting Services and Gallery to Drupal.	I successfully converted the services site, but it is currently experiencing issues with the gallery. The gallery functionality is not working as expected, and images are either not displaying or failing to load.	8
February 26 / WED	Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Converting Gallery to Drupal.	I continued working on the gallery functionality, focusing on resolving the issues related to image input in the Drupal admin panel. By troubleshooting the image upload and display process, I was able to make progress in getting the gallery to function correctly. Further adjustments are being made to ensure the images are properly inputted and displayed as intended on the site.	8
February 27 / THU	Develop skills in working within an agile or collaborative team environment, communicating	Online Meeting with sir Junard and fixing the bugs in gallery	I continued working on the gallery and design, refining the functionality to ensure everything worked seamlessly.	8

	effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.		During a meeting with Sir Junard, he pointed out that we had mostly hard-coded the site instead of utilizing Drupal's admin interface for content management. This feedback highlighted the need to shift our approach, and I focused on leveraging Drupal's admin features to make the site more flexible and easier to manage in the long run.	
February 28 / FRI	Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Studied Drupal Again and Implement the newly gained knowledge for the conversion of Brgy Pio Del Pilar Website to Drupal	I studied Drupal again to successfully utilize it as a content management system (CMS). Through this, I was able to understand how to properly manage content using the Drupal admin interface. As a result, I successfully retrieved and displayed images and text that were inserted through the Drupal admin. This reinforced my understanding of Drupal's CMS capabilities and improved my workflow.	8

PRACTICUM WEEKLY REPORT

Month: March / Week No.: 4

Company: ORTADEL Technologies Corporation

Period Covered: March 3-7, 2025

Internship Title: IT Intern

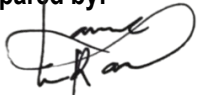

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 3 / MON	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Converting Services, Gallery and Contact Us to Drupal	I continued working on the sites using Drupal, this time focusing on the "Contact Us" section. During this process, I began learning how to use the Webform module to create and manage contact forms effectively. This involved exploring its features, setting up fields, and configuring form behavior within the Drupal environment. It was a valuable learning experience that deepened my understanding of Drupal's form handling capabilities.	8
March 4 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems..	Converting Services, Gallery and Contact Us to Drupal	I studied how to design the Webform to match the intended layout and styling. However, I encountered difficulties implementing the design within the Webform module. The challenge was primarily in customizing the appearance to align with the overall site design while working within the limitations of the module. This experience highlighted the complexity of styling Webforms and the need for a deeper understanding of Drupal's theming system.	8
March 5 / WED	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and	Converting Services, Gallery and Contact Us to Drupal	I successfully designed the "Contact Us" section, ensuring both functionality and visual design were properly implemented. With that completed, I	8

	debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.		moved on to working on the "Services" section of the site. This next phase involved organizing content and layout to align with the overall design and structure of the website. Progress continued smoothly as I applied the skills and knowledge gained from the previous tasks.	
March 6 / THU	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems..	Converting Services, Gallery and Contact Us to Drupal	I started exploring and learning how to use the Views module in Drupal to implement the gallery section. This involved understanding how to create and configure views to dynamically display content, such as images, from the Drupal database. As I worked through the setup, I began to grasp how powerful and flexible Views can be for organizing and presenting content on the site. This marked an important step in improving the gallery's functionality and integration.	8
March 7 / FRI	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems. Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Debugging the drupal version of services, gallery and contact us	I was still working on the gallery, as the display was not functioning as intended. Despite setting up the views, the images were not appearing correctly or in the desired layout. This required further troubleshooting and adjustments to the view settings, filters, and display formats. The process highlighted some of the complexities involved in using Views for dynamic content presentation in Drupal.	8

PRACTICUM WEEKLY REPORT

Month: March / Week No.: 5

Company: ORTADEL Technologies Corporation

Period Covered: March 10-14, 2025

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 10 / MON	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Deployed Pio Website on the Staging and debug some errors. Redesigned the Footer as there was an error on the code and its not fetching the block fields.	I attempted to deploy the website on a staging site and began debugging issues related to image and footer display. While everything was working correctly on my local server, the images and footer were not appearing as expected on the staging site. This required careful investigation to identify potential differences in file paths, permissions, or configurations between the environments. The experience emphasized the importance of environment-specific troubleshooting during deployment.	8
March 11 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems..	Helped with another teams website in drupal	After deploying our website project on the staging site, I assisted with other team tasks as I had become more comfortable using Drupal. I specifically helped with their footer implementation while continuing to debug issues on the staging site. Balancing both support and troubleshooting allowed me to apply what I had learned effectively and contribute to the overall progress of the project.	8
March 12 / WED	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal	Converted the Contact Us, Footer and Gallery of another teams website in drupal	I focused on helping the other team with their tasks since our project was already completed. However, we encountered an issue with the UI—despite following the intended	8

	ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.		design, Drupal was rendering a different layout. This inconsistency required further investigation into theme settings and template overrides to understand why the layout was not being applied correctly. It highlighted the nuances of Drupal's theming system and the importance of precise configuration.	
March 13 / THU	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems..	Helped with Designing Drupal in another website in drupal	I helped the other team with their gallery implementation, applying the knowledge I had gained from working on our own project. At the same time, I continued to troubleshoot the layout issue we encountered, where Drupal was not rendering the design as intended. Despite following the correct structure, the output remained inconsistent, prompting a deeper look into the theme configuration and potential overrides affecting the layout.	8
March 14 / FRI	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems. Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Helped with Debugging in another teams website in drupal	I helped debug the other team's website before presenting it to the supervisor, ensuring everything was functioning properly. I worked on resolving any issues that were preventing the site from displaying correctly and made final adjustments. Additionally, I provided guidance on how to deploy their website to the staging environment, sharing insights on the necessary steps and precautions to ensure a smooth deployment.	8

PRACTICUM WEEKLY REPORT

Month: March / Week No.: 6

Company: ORTADEL Technologies Corporation

Period Covered: March 17-21, 2025

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 17 / MON	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Finished Debugging Pio Website and Learning about SeedDMS. Short Meeting with Sir Junard.	I checked and debugged the PIO, addressing any issues that were affecting its functionality. After that, I started learning about SeedDMS, familiarizing myself with its features and capabilities. Additionally, I had a short meeting with our supervisor to discuss progress, share updates, and clarify any questions regarding the project.	8
March 18 / TUE	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features..	Reading parts of Seed DMS and search for security assigned in archiving system	I read documentation and watched videos about SeedDMS to better understand how to install and configure it. This helped me familiarize myself with the installation process, system requirements, and key features of SeedDMS. By going through these resources, I gained the knowledge necessary to set up and utilize the system effectively.	8
March 19 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Attempting to install SeedDMS but facing issues, including missing files and version conflicts.	I attempted to install SeedDMS, but encountered an issue during the extraction process, where the symlink was not being extracted properly. This caused a delay in the installation, as the symlink is crucial for the correct setup of the system. I plan to troubleshoot the issue by checking the extraction process and ensuring that	8

			all necessary components are correctly configured and linked.	
March 20 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Exploring and studying SeedDMS, gaining a deeper understanding of its features and functionalities while troubleshooting installation issues and resolving any encountered errors.	I'm still facing issues with installing SeedDMS, particularly with the symlink extraction problem. However, I've been exploring other potential solutions, watching more videos, and reading additional documentation to better understand how to resolve the issue. I'm continuing to troubleshoot by trying different approaches to ensure the installation proceeds smoothly.	8
March 21 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Exploring advanced encryption and decryption methods to enhance security.	I explored and studied encryption methods, which led me to learn that we will be using AES-256 for securing our data. This algorithm is known for its strong encryption capabilities, and understanding its application will help ensure the security of sensitive information within the system. The study provided valuable insights into how encryption will be implemented in our project.	8

PRACTICUM WEEKLY REPORT

Month: March / Week No.: 7

Company: ORTADEL Technologies Corporation

Period Covered: March 24-28, 2025

Internship Title: IT Intern

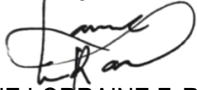

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 24 / MON	Gain experience in setting up, configuring, and customizing Drupal websites, including working with content types, views, blocks, and taxonomies.	Fixing the error of using github with seeddms.	I'm still encountering issues with the installation, especially when fetching the file from GitHub. This is a key part of our collaboration process, as we'll be working with the GitHub repository to manage and share the project. The problem seems to be related to either the file structure or dependencies when pulling from the repository. I'm continuing to troubleshoot by reviewing the repository setup and installation instructions to ensure we can successfully collaborate and implement SeedDMS.	8
March 25 / TUE	Gain hands-on experience in Drupal module and theme development, applying best practices in coding, version control (e.g., Git), and debugging within the Drupal ecosystem. Expand expertise in PHP, JavaScript, and Drupal-specific technologies (e.g., Twig, Drush) while deepening your understanding of Drupal's API and core systems.	Reviewing and Fixing the QA review on PIO website	I received the QA feedback from another team regarding the deployed Drupal site and began debugging the issues they identified. This involved revisiting the site, analyzing the reported problems, and making the necessary adjustments to ensure everything was functioning correctly. After addressing the issues, I re-tested the site to confirm that the bugs were resolved before moving forward.	8
March 26 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database	Studied the SeedDMS requirements in security	I studied the SeedDMS requirements in more detail and split the responsibilities with Jayem to streamline the process. This division of tasks allowed us to focus more	8

	structure, user roles, workflow automation, and document versioning features.		efficiently on different aspects of the installation and configuration. Additionally, I continued learning more about AES-256 encryption, gaining a deeper understanding of its implementation and how it will be applied in our project to ensure robust data security.	
March 27 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Assessing how to Apply the non functional and functional in SRS	I am currently assessing how to apply both non-functional and functional requirements in the Software Requirements Specification (SRS). This involves clearly defining the system's expected functionality, such as features and user interactions (functional requirements), and the system's performance, security, and usability criteria (non-functional requirements). By carefully outlining these in the SRS, I can ensure that the project meets both user needs and technical specifications effectively.	8
March 28 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features. Develop skills in working within an agile or collaborative team environment, communicating effectively with team members, designers, and other stakeholders, especially in Drupal-based projects.	Splitting the task in Security with JayEm to speed things up but we in tentative task to determine which task are suits and easy for us	I split the security tasks with JayEm to speed up the process and improve efficiency. We tentatively determined which tasks would suit each of us based on our strengths. For me, the focus will be on handling logs, specifically decrypting and encrypting them. Both JayEm and I will collaborate on the encryption and decryption aspects, while JayEm will take responsibility for malware scanning. This division allows us to tackle the security requirements more effectively.	8

Internship Title: IT Intern

Date	Target Learning Objectives (Based on Internship Plan)	Task/Assignment/Activities	Problems Encountered and Resolution/New Learnings	Total Credited Hours
March 31 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Resolving the existing error that is preventing the system from running.	The system is currently encountering issues, with errors appearing as we attempt to fix them. Each fix seems to lead to new errors, making the troubleshooting process more challenging. I'm continuing to address these issues step by step, analyzing the root causes and making necessary adjustments to stabilize the system. It's a bit of a cycle, but we're focused on resolving each problem as it arises.	8
April 2 / WED	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Resolving the existing error that is preventing the system from running.	I'm still encountering the issues and working on fixing them. Despite the challenges, I'm continuing to troubleshoot and identify the root causes of the errors. Each attempt brings us closer to resolving the problems, but it's still a process of trial and error as I work through the remaining issues.	4
April 3 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	I examined methods for securing file storage and transmission by implementing AES-256 encryption for uploaded files before storage, utilizing SSL/TLS for secure file transfers, and incorporating automatic key rotation to enhance overall security.	I examined and learned more about AES encryption, specifically focusing on key rotation. Key rotation is a critical practice for enhancing security by periodically changing encryption keys, reducing the risk of keys being compromised over time. Understanding how to implement key rotation with AES will help ensure	4

			better long-term security for the system.	
April 4 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Tested and applied the AES-256 on SeedDMS and tried to make it work but still running on some issues.	I tested and attempted to apply AES-256 encryption on SeedDMS to enhance data security. While I was able to begin the integration process, I'm still running into some issues with making it work as expected. These challenges are helping me better understand the technical requirements and limitations of applying encryption within the system. I'm continuing to debug and explore solutions to ensure a smooth and secure implementation.	8

April 7 / MON	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Tested and applied the AES-256 on SeedDMS and tried to make it work but still running on some issues.	I tested and attempted to apply AES-256 encryption on SeedDMS, aiming to secure the system's data. While I managed to begin the integration, I'm still facing several issues—particularly with displaying and fetching the encrypted data. At the moment, the system is not properly retrieving or showing the expected content, which suggests there may be a problem with how the encryption and decryption processes are interacting with the data flow. I'm continuing to investigate and debug these issues to get the functionality working as intended.	8
April 8 / TUE	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Tested and applied the AES-256 on SeedDMS and tried to make it work but still running on some issues.	I tested and attempted to apply AES-256 encryption on SeedDMS, working to integrate it into the system. While I was able to start the implementation, I'm still running into issues—specifically with the displaying and fetching of data. Currently, the system is not retrieving or showing the encrypted content as expected, which indicates possible issues with the decryption process or data handling within SeedDMS. I'm continuing to investigate and debug to resolve these problems and ensure the encryption	8

			works smoothly with the system's data flow.	
April 10 / THU	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Found the fetching and displaying of data and started encrypting and decrypting the data.	I was able to locate the part of the system responsible for fetching and displaying data in SeedDMS, but still struggling to find the other displaying and fetching of data. With that issue resolved, I began working on the encryption and decryption process using AES-256. Initial tests are underway to ensure that data is being securely encrypted during storage and properly decrypted when accessed. This marks a significant step forward in integrating security features into the system.	8
April 11 / FRI	Gain experience in SeedDMS, an open-source document management system, by learning how to set up, configure, and customize it for different use cases. Understand its database structure, user roles, workflow automation, and document versioning features.	Found the fetching and displaying of data and started encrypting and decrypting the data	I am still working on locating the remaining sections of the system responsible for displaying and fetching data within SeedDMS. At the same time, I'm continuing to implement AES-256 encryption and decryption for the data that passes through the website. This involves ensuring that all sensitive data is properly secured during transmission and storage. Balancing both tasks is helping to gradually strengthen the overall security and data handling processes of the system.	8

Supervisor's Remarks:

Total Hours Rendered	32
Remaining Hours	70

Prepared by:

A handwritten signature in black ink, appearing to read 'Anne Lorraine F. Ramos', written over the printed name.
