

COMPROG1 ACTUAL EXAM

EASY

1. Create a java program that will let user accept a NAME. The program must identify if the NAME starts with a VOWEL or CONSONANT after greeting the entered NAME. Refer to sample output below:

Enter a name: Anunsacion

Hi, Anunsacion!!!

Your name starts with a vowel.

2. Write a Java program that accepts two integer values from the user and return the larger values. However, if the two values are the same, return 0 and return the smaller value if the two values have the same remainder when divided by 6. Refer to sample output below:

Input the first number: 12

Input the second number: 13

Result: 13 is larger than 12

3. Create a java program using array that will accept numbers as row and column and output the multiplication table based on the inputs. Below is the sample output:

Input number of ROW: 4

Input number of COLUMN: 3

1	2	3
2	4	6
3	6	9
4	8	12

4. Create a java program that will compute for the sum of even numbers and odd numbers depending on the user inputted number. Below is the sample output:

Enter a number: 10

Sum of odd numbers from 1 to 10 is 25

Sum of even numbers from 1 to 10 is 30

DIFFICULT

1. Create a java program that randomly accepts 10 numeric whole numbers. Then identify and display all ODD and EVEN numbers in separate lines. Refer to sample output below:

Enter 10 numeric whole numbers below

No.1: 15

No.2: 78

No.3: 37

...

Accepted values are: 15 78 37 81 13 52 5 63 9 34

ODD numbers are: 15 37 81 13 5 63 9

EVEN numbers are: 78 52 34

2. Write a Java program to print numbers between 1 to 50 which are divisible by 3, 5 and by both. Refer to sample output below:

Divided by 3:

3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45, 48,

Divided by 5:

5, 10, 15, 20, 25, 30, 35, 40, 45, 50,

Divided by 3 & 5:

15, 30, 45,

3. Create a java program that will let the user to enter five numbers. Your program must sort those numbers in ascending order and display the sorted array. Below is the sample output:

Enter number 1: 3

Enter number 2: 5

Enter number 3: 10

Enter number 4: 1

Enter number 5: 7

Unsorted Array is

3 5 10 1 7

Sorted Array is

1 3 5 7 10

4. Create a java program that will let the user to insert five numbers and view those numbers.

Choose operation [1] Insert [2] View [3] Exit: 1

Enter number: 20

Choose operation [1] Insert [2] View [3] Exit: 1

Enter number: 25

Choose operation [1] Insert [2] View [3] Exit: 2

20 25 0 0 0

Choose operation [1] Insert [2] View [3] Exit: 1

Enter number: 100

Choose operation [1] Insert [2] View [3] Exit: 2

20 25 100 0 0

Choose operation [1] Insert [2] View [3] Exit: 3

Process Completed.

5. Declare a 12-element, one dimensional array named **monthDays**. Use the number of days in each month to initialize the array. (use 28 for February.) Write a code that allows the user to enter the month number (1 for January, 2 for February, and so on). The program should display the number of days in the month corresponding to the number entered by the user. Include a loop that allows the user to enter as many month numbers as desired.

Sample Run:

Enter month number: 2

February

1, 2, 3, 4, 5, 6, 7,, 28

Try Again (y/n): y

Enter month number: __

Enter month number: 10

October

1, 2, 3, 4, 5, 6, 7,, 31

Try Again (y/n): n

BYE!

6. Define 2 single dimensional integer arrays with 5 elements/each named **array1** and **array2** respectively. Write a program that will merge the two arrays and store in a new array named **array3** and display the average of all the elements of array3

Sample Run:

Array1: 80, 90, 100, 50, 60

Array2: 75, 85, 70, 65, 95

Array3: 80, 90, 100, 50, 60, 75, 85, 70, 65, 95

Average: 77
